

Naveenraj Ravi

AI Engineer - Security | Web Application Security | AI Security

Chennai, Tamil Nadu, India • +91 7338758880 • itsnaveenraj@gmail.com

naveenrajravi.netlify.app • linkedin.com/in/naveenraj-ravi

Security Engineer with **4+ years of experience** securing enterprise-grade SaaS products across application security, DevSecOps, and cloud security. Proven track record of embedding **shift-left security controls** into engineering workflows, leading critical incident response, and building automated detection systems that reduce recurring vulnerabilities before release. Strong background in **penetration testing, source code review, vulnerability management, and security automation**, with hands-on experience using **AI tools** to improve analysis, productivity, and security workflows in modern engineering environments.

Experience

SEPTEMBER 2024 – PRESENT

Senior Security Engineer | Freshworks

- Led **Web, API, and AI security assessments** across products, conducting vulnerability assessments, penetration testing, and **SAST/SCA analysis** to identify risks, guide remediation for microservices and core platforms, and support **secure SDLC** and product governance initiatives.
- Advanced **shift-left security** by onboarding and operationalizing Snyk for SAST, SCA, secrets detection, and open-source risk visibility, while developing **custom SAST rules** to strengthen detection coverage and improve code security earlier in the development lifecycle.
- Managed end-to-end lifecycle of **Hackerone researcher submissions and customer escalations**, ensuring effective internal coordination and risk mitigation.
- Drove **design-level fixes for SSRF and insecure-design vulnerabilities** - shipped URL allowlists and egress controls; led secure-design reviews and threat-modeling to remediate **10+ recurring issues** across product surfaces.
- Performed **LLM product security assessments** for AI chatbots and tools, mitigating **prompt injection, jailbreaks, insecure output handling, and sensitive data leakage** in alignment with the OWASP Top 10 for LLM Applications; applied adversarial testing, guardrails, and PII redaction to improve security posture and support zero critical AI-feature incidents post-launch.
- **AI-driven security tooling**: Built LLM-assisted **triage workflows** for HackerOne findings, **cutting analyst review time by ~50%**.
- Conducted threat actor analysis and correlated logs across distributed platforms to produce detailed **root cause analyses for critical security incidents**, improving incident response quality and guiding effective long-term fixes.

OCTOBER 2022 – SEPTEMBER 2024

Associate Engineer – Product Security | Temenos

- Performed manual and tool-assisted **penetration testing across core-banking web, API, and mobile surfaces**; identified high-impact issues including **authentication bypass, IDOR, access-control flaws, and business-logic vulnerabilities**.

- Executed **source-code reviews and threat modeling** for new product features, partnering with architects and developers to address risks earlier in the SDLC.
- Integrated **SAST and SCA tooling** into developer workflows and coached engineers on remediation, improving fix rates and reducing reopened issues.
- Owned the full product security testing lifecycle, from threat modeling through remediation validation.
- Strengthened cloud posture by hardening Azure endpoints and designing **VM patch management** strategies.
- Configured and validated **Azure Web Application Firewall (WAF) rulesets** to protect production workloads.
- Contributed to customer audit responses and compliance evidence (PCI DSS), preparing technical security documentation and penetration-test attestations for enterprise banking customers.
- Engaged directly with customers on security calls to explain vulnerabilities, remediation status, and risk considerations, helping build trust and manage issues effectively across internal and external stakeholders.

Certifications

- Claude Certified Architect - Professional
- Claude Certified Architect - Foundations
- Claude Certified Developer - Foundations
- Certified AI Security Professional (CAISP)
- GIAC Certified Web Application Defender (GWEB)
- Certified DevSecOps Professional (CDP)

Skills

Application Security - SAST, SCA, DAST, Secrets Scanning, Threat Modeling, Source Code Review, OWASP Top 10 / ASVS, API Security, Web & Mobile Penetration Testing

DevSecOps & Automation - CI/CD Security, Shift-Left Implementation, SBOM Management, OSS License Compliance

Cloud Security - Azure WAF configurations

Vulnerability & Risk Management - VAPT, Bug Bounty Triage, CVSS Scoring, Risk Assessment, Remediation Tracking, Vulnerability Disclosure

AI & LLM Security - Prompt Injection Testing, OWASP Top 10 for LLMs, MITRE ATLAS, RAG & Vector Store Security, AI Supply Chain Risk, Secure AI Adoption

AI-Augmented Engineering - Claude Code, Prompt Engineering, Context Engineering, MCP, AI-Assisted Code Review, Agentic Automation for Security Tooling, LLM Evals

Tools & Languages - Burp Suite, Snyk, OWASP ZAP, Postman, Nmap, HackerOne, Git/GitHub · Python, JavaScript

Education

MARCH 2022

Bachelor of Engineering – Computer Science | St. Joseph's Institute of Technology

8.4 CGPA
